

Enjoy a healthier home with a Daikin air purifier

Powerful air purification

According to Allergy UK, we spend on average 90% of our time indoors. So good indoor air quality is crucial for our health.

Pure indoor air is especially important for vulnerable groups – such as the very young and old, as well as people living with respiratory diseases and allergies.

Daikin's Air Purifier is designed to deal with harmful particles, as well as dust, odours, bacteria, pet hairs, moulds, pollen and mites and other allergens, leaving the indoor air clean and healthy.

Whisper quiet performance

Because it's so compact and whisper quiet, Daikin's light-weight air purifier is ideal for use in your home office, living room or bedroom. And it has four different fan settings - quiet, low, standard and turbo - to suit the needs of your family and home environment.

Pure air thanks to patented technology

At the heart of the Air Purifier is Daikin's Streamer technology, which releases ions into the air and generates active components that attach to the surface of fungi and allergens and decompose hazardous elements.

Inactivates airborne viruses

The patented Streamer technology is not meant to be used for medical purposes, however it inactivates more than 99.9% of the novel Coronavirus (SARS-CoV-2) after three hours.*

The Daikin MC55VB Air Purifier:

- Cleans an interior space of up to 41m²
- Inactivates more than 99.9% of the novel Coronavirus (SARS-CoV-2) after three hours*
- Approved by Allergy UK as efficiently reducing small allergens, bacteria and viruses

Powerful suction

The air purifier cleans a space of up to 41m² taking air from the front and side of the unit covering a wide area and discharging clean air from the top.

Filtering fine dust particles

The electrostatic filter collects dust effectively without clogging, so it can filter a larger amount of air than typical mesh filters.

Easy to clean

To keep it working at optimum efficiency, the unit can simply be cleaned using a damp cloth or vacuum cleaner and the filter only needs changing every 10 years (depending on usage and location).
